† Crizal Kids UV lenses are bundled products. They come as a single vision polycarbonate lens, coated with the respective Crizal® No-Glare lens treatment.

THE 3 PILLARS OF CRIZAL®

Clarity.....

Embedded anti-reflective layers reduce glare and allow 99% of light to pass through. A patent-pending nanolayer with Multi-Angular Technology™ further enhances clarity by reducing reflections at every angle.

Durability.....

An embedded hard coat, combined with the SR Booster™ layer, provides excellent scratch resistance. An HSD™ Super Hydrophobic layer resists smudges and makes lenses easier to clean.

Protection.....

A backside protection layer helps prevent UV rays from bouncing off the back of the lens and into the eyes while the front of the lens provides up to 100% protection* from these harmful rays. With Crizal® Prevencia®, an additional layer on the front side filters up to 20% of Harmful Blue Light**.

* With the exception of clear plastic (1.50) substrates.

** Harmful Blue Light is the blue-violet wavelengths between 415-455nm on the light spectrum, believed most toxic to retinal cells.

Image represents the Crizal Sapphire® 360° UV No-Glare lens treatment stack. Thickness and order of layers is for demonstration purposes only.

CRIZAL® PRODUCT GUIDE

- + optimal UV protection²

Crizal.
Alizé UV™

Crizal® Easy UV™ + improved cleanability, smudge resistance and comprehensive UV protection²

Crizal.
Easy UV™

Durable no-glare lens with comprehensive UV protection²

(1) Best-in-class is defined as best performance of a certain attribute within the Crizal® portfolio.

(2) In a clear lens, Crizal Alizé UV and Crizal Easy UV offer comprehensive UV protection, while Crizal Sapphire® 360° UV, Crizal® Rock™, Crizal® Prevencia®, and Crizal® Avancé UV™ offer optimal UV protection, on all lens materials except 1.50 clear plastic, the higher the E-SPF® index, the greater the level of UV protection provided by the lens // E-SPF is an index rating the overall UV protection of a lens. E-SPF was developed by Essilor International and endorsed by third party experts. The E-SPF index relates to lens performance only and excludes direct eye exposure that depends on external factors (wearer's morphology, frame shape, position of wear).

(3) Harmful Blue Light is the blue-violet wavelengths found between 415–455nm on the light spectrum believed most toxic to retinal cells. Harmful Blue Light protection only available with Crizal Prevencia. Crizal Prevencia No-Glare lenses filters at least 20% of Harmful Blue Light.

Applies to the Crizal lens process

CRIZAL® NO-GLARE LENSES

Worn and trusted by millions of people worldwide.
